DOCUMENTATION OF LAND USE PLAN CONFORMANCE AND NEPA ADEQUACY

NUMBER CO-110-2006-098-DNA

CASEFILE/PROJECT NUMBER (optional): TBD

PROJECT NAME: May 2006 Oil and Gas Lease Sale

LEGAL DESCRIPTION: See attached Appendix B

APPLICANT: BLM – Colorado State Office

ISSUE AND CONCERN: (optional):

DESCRIPTION OF PROPOSED ACTION: The BLM proposes to sell oil and gas leases on Thirty two parcels of public lands/minerals comprising approximately 51,600 acres, in May of 2006. Portions of fourteen of these parcels are managed by the Little Snake Field Office. All parcels would be offered at public auction along with several other parcels in other jurisdictions. Following the auction any unsold parcels could be sold non-competitively. Each lease would be issued subject to stipulations identified in the White River ROD/RMP. These stipulations are specified in attached Appendix B. Additional site specific analyses would take place upon submission of individual Applications for Permit to Drill.

LAND USE PLAN (LUP) CONFORMANCE REVIEW: The proposed action is subject to the following plan:

Name of Plan: White River Record of Decision and Approved Resource Management Plan (ROD/RMP).

Date Approved: July 1, 1997

X The Proposed Action is in conformance with the LUP because it is specifically provided for in the following LUP decision(s): M-1

Decision Language: Make federal oil and gas resources available for leasing and development in a manner that provides reasonable protection for other resource values.

The Proposed Action is in conformance with the LUP, even though it is not specifically provided for, because it is clearly consistent with the following LUP decisions (objectives, terms, and conditions):

_____ The Proposed Action is in conformance with the LUP, even though it is not specifically provided for, because it is clearly consistent with the following LUP decisions (objectives, terms, and conditions):

REVIEW OF EXISTING NEPA DOCUMENTS:

List by name and date all existing NEPA documents that cover the Proposed Action.

Name of Document: White River Resource Area Proposed Resource Management Plan and Final Environmental Impact Statement (PRMP/FEIS).

Date Approved: May 29, 1996

Name of Document:

List by name and date any other documentation relevant to the Proposed Action (e.g., biological assessment, biological opinion, watershed assessment, allotment evaluation, and monitoring report).

Name of Document:

Date Approved:

NEPA ADEQUACY CRITERIA:

1. Is the Proposed Action substantially the same action and at the site specifically analyzed in an existing document?

Documentation of answer and explanation: Yes. Leasing and subsequent development of oil and gas resources are specifically analyzed in the PRMP/FEIS: see pages 3-3, 3-4, and Appendix D. With the exception of certain formally identified Wilderness Study Areas, oil/gas leasing is provided for throughout the resource area, subject to stipulations and conditions of approval identified in Appendix A and Appendix B to the ROD/RMP. All lands considered in this action are open to leasing under the RMP. Stipulations specific to the lands considered for leasing are attached to this DNA.

According to the Tenth Circuit Court of Appeals, site-specific NEPA analysis is not possible absent concrete proposals. Filing of an Application for Permit to drill is the first useful point at which a site specific environmental appraisal can be undertaken. (Park County Resource Council, Inc. v. U.S. Department of Agriculture, 10th Cir., April 17,

1987) In addition, the Interior Board of Land Appeals has decided that, “BLM is not required to undertake a site-specific environmental review prior to issuing an oil and gas lease when it previously analyzed the environmental consequences of leasing the land...” (Colorado Environmental Coalition, et. al, IBLA 96-243, decided June 10, 1999)

2. Was a reasonable range of alternatives to the Proposed Action analyzed in the existing NEPA document(s), and does that range and analysis appropriately consider current environmental concerns, interests, and resource values?

Documentation of answer and explanation: Yes; five alternatives, covering a full range of oil and gas leasing options, were addressed in the PRMP/FEIS (see Table 1-1 of that document). No reason to identify and analyze additional alternatives for the lands involved in this proposal has been presented or raised, and these alternatives are considered to be adequate and valid for the proposed action.

3. Does the information or circumstances upon which the existing NEPA document(s) are based remain valid and germane to the Proposed Action? Is the analysis still valid in light of new studies or resource assessment information?

Documentation of answer and explanation: Yes, the analysis in the RMP remains valid. Previous analyses were based upon a reasonable foreseeable development scenario that estimated the drilling of approximately 1100 wells, over the twenty year life of the plan (roughly 55 per year). To date, the average number of wells drilled has been very close to that number. Total disturbance was estimated at 10 acres per well (to include the pad, the road, and the pipeline). To date, the average disturbance per well has been approximately 5 acres. No land status changes have occurred, and no new site specific studies or resource assessment information has been received regarding any of the listed parcels that would preclude leasing in accordance with the existing planning documents and decisions made therein.

Portions of six parcels are within an area proposed for wilderness by members of the public (Pinyon Ridge). This area was inventoried as a part of the original WSA review process in the late 1970's/early 1980s, and dropped as a WSA. Additional information was received regarding the possible wilderness (or other resource) related values. The information was reviewed and the area re-inventoried in 1997. As a result, the area was once again determined to not meet wilderness criteria. By State Director decision of November, 1998, the Pinyon Ridge area is to be managed under the decisions made in the ROD for the RMP/EIS. These decisions allow oil and gas leasing in this particular area.

Previous sales of parcels in the vicinity of Dinosaur National Monument have resulted in comments regarding impacts on the visual resources. These impacts were adequately addressed in the White River Resource Area Proposed Resource Management Plan and Final Environmental Impact Statement (see pages A-26 and A-27 of that document).

4. Does the methodology and analytical approach used in the existing NEPA document(s) continue to be appropriate for the Proposed Action?

Documentation of answer and explanation: Yes. The methodology and analytic approach used in the PRMP/FEIS are appropriate for the current proposed action. No new technologies or methodologies have been proposed or are warranted.

5. Are the direct and indirect impacts of the Proposed Action unchanged from those identified in the existing NEPA document?

Documentation of answer and explanation: Yes. The anticipated direct and indirect impacts from oil and gas leasing/development are addressed in a resource-specific fashion in the PRMP/FEIS, based on a reasonable foreseeable development scenario that, to date remains accurate. The anticipated direct and indirect impacts of the proposed action are the same as those addressed in the PRMP/FEIS, and they were adequately addressed therein.

6. Are the cumulative impacts that would result from implementation of the Proposed Action unchanged from those analyzed in the existing NEPA document(s)?

Documentation of answer and explanation: Yes. The cumulative impacts of oil and gas developments, as well as other resource management actions, were addressed in the PRMP/FEIS based on a reasonable foreseeable development scenario, and has, to date, proven accurate. If implemented, the proposed action would not change this analysis, nor would it require new or additional analyses. The anticipated cumulative impacts of the proposed action are within the range of impacts analyzed in the PRMP/FEIS.

7. Is the public involvement and interagency review associated with the existing NEPA document(s) adequate for the Proposed Action?

Documentation of answer and explanation: The public, interested groups, and other agencies, were fully involved in the development of the PRMP/FEIS. The public, interested groups, and other agencies, were fully involved in the development of the PRMP/FEIS.

INTERDISCIPLINARY REVIEW: Identify those team members conducting or participating in the NEPA analysis and preparation of this work sheet (by name and title).

The proposed action was presented to, and reviewed by the White River Field Office interdisciplinary team on February 21, 2006.

Date

A list of resource specialists who participated in this review is available upon request from the White River Field Office.

REMARKS:

Cultural Resources: Parcels 3360 and 3363, in Disappointment Draw, are in an area with an unusually high number particularly significant cultural resources including one of the deepest stratified and least explored Paleo-Indian sites in Colorado. Parcel 3367 is also in an area of high cultural resource potential. Of major concern here is the opening up of these areas, which are remote and without good access, through development of roads associated with oil and gas activities. This would greatly increase the potential for vandalism of these resources.

Native American Religious Concerns: There are no known Native American Religious Concerns.

Threatened and Endangered Species: Twenty of the parcels are in the Wolf Creek Black-footed Ferret Management Area. Controlled Surface Use Stipulations would be added to the appropriate lease parcels. Based on the wording in the stipulation, the Field Manager may impose land use measures and limitations derived from a site specific ferret reintroduction and management plan. A Cooperative Plan for Black-footed Ferret Reintroduction and Management, Wolf Creek and Coyote Basin Management Areas was completed by the Wolf Creek Work Group in 2001, and language therein will be incorporated in a lease notice to be attached to applicable leases. See Appendix A.

MITIGATION: See Appendix B for measures identified in the RMP.

COMPLIANCE PLAN (optional):

NAME OF PREPARER: Vern Rholl

NAME OF ENVIRONMENTAL COORDINATOR: Caroline Hollowed

DATE: 02/24/2006

ATTACHMENTS: Appendix A

CONCLUSION

CO-110-2006-98-DNA

Based on the review documented above, I conclude that this proposal conforms to the land use plan and that the NEPA documentation previously prepared fully covers the Proposed Action and constitutes BLM's compliance with the requirements of NEPA.

SIGNATURE OF RESPONSIBLE OFFICIAL:

Therese E. Walter
Field Manager

DATE SIGNED:

03/06/06

Note: The signed Conclusion on this worksheet is part of an interim step in the BLM's internal decision process and does not constitute an appealable decision.

APPENDIX A

In order to alert the lessee of potential requirements and restrictions to protect black-footed ferrets, the following language, taken from A Cooperative Plan for Black-footed Ferret Reintroduction and Management, Wolf Creek and Coyote Basin Management Areas (Wolf Creek Work Group, 2001), will be developed into a Lease Notice, and attached to applicable leases:

A “Plan of Operations” will be developed for large or multi-year mineral development programs that occur on federal estate within the Ferret Management Area.

Mineral development and utility installation activities will be designed to avoid adverse influence on prairie dog habitat. In the event adverse impacts to prairie dog habitat are unavoidable, activities will be designed to influence the smallest area practicable and/or those areas with the lowest prairie dog densities. When proposed developments cannot be designed or implemented to avoid substantive adverse impacts to the black-footed ferret or their habitat, the project proponents and appropriate agency(ies) would cooperatively develop a mitigation plan (described below).

Ferret occupation at the site of a proposed commercial activity may require special mitigation measures (e.g. delay of activities, capture and relocation of ferrets, habitat mitigation, modification to the design of activities or facilities, singularly or in combination). The course of events chosen will be determined cooperatively by the operator, Colorado Division of Wildlife, and United States Fish and Wildlife Service at the time of an identified conflict. Reliable evidence of a ferret occupying a proposed project vicinity during the reproductive period may warrant imposing measures as Conditions of Approval in an effort to reduce the risk of compromising ferret reproductive efforts. Such measures may include relocating the proposed facility, modifying the conduct of an activity, or imposing a timing limitation (1 May to 15 July) on suitable habitats within ½ mile of the documented evidence.

Impacts to prairie dog habitat will be mitigated to maintain objective levels of active prairie dog towns on BLM lands within the Management Area. Current management prescription is to maintain 15,500 acres of occupied prairie dog habitat on BLM surface within the Management Area with prairie dog populations sufficient to support at least 50 breeding age adult ferrets. The recommended default objective for compensation is equal and in-kind replacement of the disturbed or destroyed prairie dog habitat via a cooperatively arranged expansion or enhancement of other prairie dog colonies in the Management Area.

On-site habitat reclamation will be required upon cessation of temporary (less than 2 year) surface disturbances as necessary.

As a general rule, acre-for-acre mitigation will be required for habitat lost due to permanent (equal to or greater than 2 year) surface disturbances.

Suggested forms of mitigation are listed below:

- 1) Vegetation Treatment. Burning, mechanical, and/or chemical treatments applied to areas with excessive or otherwise incompatible vegetation adjacent to existing towns and likely to be colonized by prairie dogs following land treatment.
- 2) Relocation of Prairie Dogs. Prairie dogs translocated from the site of surface disturbance to an area with vacant burrow systems.
- 3) Create New Burrow Systems. The construction of artificial burrows in potential habitat which is lacking burrows and relocating affected prairie dogs to the artificial burrows.
- 4) Habitat Banking. To avoid the inconvenience and inefficiency of implementing a large number of small mitigation projects over time, operators would have the option of implementing larger mitigation projects that could be used as a credit against future habitat modifications.

The lands subject to this Lease Notice are the same lands that are subject to Exhibit WR-CSU-03.
